

## PC ASSEMBLY

Date : 22<sup>nd</sup> November 2023

Time : 3.00 p.m. – 4.00 p.m.

Venue : Software Innovation Lab (Level 3, N28)

Reflection :

Even though I encountered a minor problem with cable management after finishing the PC assembly, everything went without a hitch. Following testing, the system failed to function. After then, we reopened the case to determine the issue. It looks that the random access memory (RAM) was not put in correctly. I learned how crucial it is to pay close attention to details from this experience. I feel proud of myself for not only building a functional PC but also for learning enlightening things about efficient assembly methods and troubleshooting.
